

Figure Problem: ROUNDED SHOULDERS...
 often termed the Dowager Hump

FITTING PROBLEM

- The shoulder Key Grain Line swings up as it approaches center back
- Bodice is too tight across upper shoulder section
- Bodice is shorter at center back

CORRECTION

- To widen shoulders add needed amount of fabric on armhole starting at shoulder line and tapering to nothing at notch.
- Add needed amount of fabric at neck edge of shoulder line — tapering to nothing at armhole. Cut normal neckline
- Increase the back shoulder dart (or add dart) the same amount as added to armhole to match shoulder seams

NOTE: These alterations are a combination of those for FULLNESS AT BASE OF NECK and BROAD SHOULDERS

CORRECTION — for Sleeve and Bodice Cut In One

- Cut normal neckline and move pattern to add needed amount of fabric at center back
- Add needed amount of fabric at neck edge of shoulder line tapering to nothing at regulation shoulder point
- Use shortened curved dart to take out of shoulder line same amount of fabric as added at center back

NOTE: See page 9 for shortened curved dart
